# INTRODUCTION

Many hostellers may face health issues and not even able to go to mess to take their food .They may neglect to take the food which leads to weakness .This neglect results in a lack of access to proper meals that are crucial for their recovery and well-being.

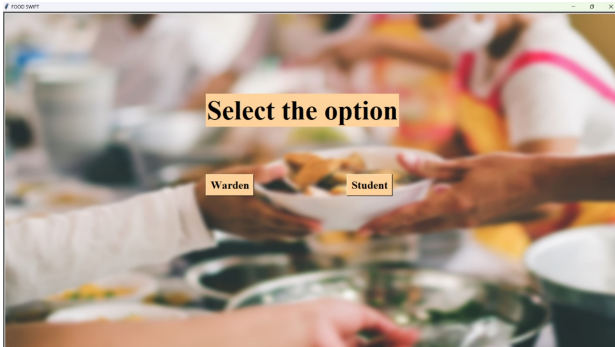

# SOLUTION

- To address the negligence of food during health issues in hostels, we propose implementing a comprehensive meal support program.
- This will include delivering food to the hostel room with the help of the warden. By providing student details the food will come to the door step.
- The warden will monitor the students who are having health issues. This data will be maintained by the warden.
